File Formats and Distribution

EPS: stands for Encapsulated PostScript. This is the preferred file format for reproducing the Archery NZ Logo in all use cases. EPS files are scalable and resolution-independent, making them ideally suited for reproduction in Pantone (Spot), Process (CMYK), and onscreen (RGB) environments.

NOTE: Please do not open EPS files. These files are intended to be downloaded, placed and sized directly within a layout software application such as Adobe InDesign.

GIF: stands for (Graphics Interchange Format). GIF files are RGB only, resolution-dependent @ 72 ppi (pixels per inch measures the resolution provided by devices in various contexts), and limited to a 256-color maximum colour palette.

These files may be scaled down, but not up. Use GIF ONLY for electronic media and NEVER for print.

NOTE: If there is a need for the Archery NZ Logo in any other file format, these files should always be created from the EPS files, using the appropriate colours and clear space, and at 100% of the final placed size.

Colour Formats: (provided in EPS format)
RGB

RGB (Red, Green, Blue) files should only be used when creating artwork for viewing onscreen. This can be for use within raster programs like Adobe Photoshop when creating graphics for the web.

Or for placement into page layout programs such as Adobe InDesign or QuarkXPress for creation of PDFs to be viewed onscreen, or into PowerPoint for presentation decks.

Spot Colour

Used exclusively for print, these files are to be placed into page layout programs for output to lithographic printing using our specific spot ink colours.

CMYK

Used exclusively for print, the colours within CMYK files have been separated into Cyan, Magenta, Yellow and Black.

These files are to be placed into page layout programs such as Adobe InDesign or Quark xPress for output to process lithography or digital printing.

Do not use these files for the creation of artwork that will be viewed onscreen.
