

This information on Rankings has no effect or connection with the official ArcheryNew Zealand Rankings which are available on the ANZ website.

The current divisions included in these rankings totals 44 - and there are more available if required. This is a lot of reading and for minority divisions are short on competition. As Indicated in the chart below many different divisions compete the same rounds. To make for a more competitive environment and a more stimulating read, the divisions will now be amalgamated in to bigger groups. where all compete the same round. This will transform the present 44 divisions in to 16 more expansive groups. The system will now give each archer 2 separate rankings. The first column on a monthly return will be an 'open' ranking within each group, and the second column will contain your own 'division' ranking. The use of colour coding will identify the different divisions within each group. This summary might be a bit mystifying to get a proper grasp on an explanation, but I can assure you that it will all be easy to understand once the next monthly return containing the new system is available in front of you

The conversion rate is not a complicated mathematical calculation but has been arrived at through analysing historic scores and averaging results to get a percentage expected score. It is of no advantage to anyone over another within a group as they would all use the same calculation. Each group has been assessed for their own specific calculation. The conversion rate is used to convert a WA1440 score in to a WA720 score.
